⚠ Important safety information

Read these instructions carefully. Only then will you be able to operate your appliance safely and correctly. Retain the instruction manual for future use or for subsequent owners.

Check the appliance for damage after unpacking it. Do not connect the appliance if it has been damaged in transport.

The microwave oven is intended for heating food and beverages. Drying of food or clothing and heating of warming pads, slippers, sponges, damp cloth and similar may lead to risk of injury, ignition or fire.

Only a licensed professional may connect appliances without plugs. Damage caused by incorrect connection is not covered under warranty.

This appliance is intended for domestic use only. The appliance must only be used for the preparation of food and drink. The appliance must be supervised during operation. Only use this appliance indoors.
This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capacity or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.

Children shall not play with the appliance.

Cleaning and user maintenance shall not be made by children without supervision.

The appliances are not intended to be operated by means of an external timer or separate remote-control system.

This appliance is intended to be used in household and similar applications such as:
- staff kitchen areas in shops, offices and other working environments;
- farm houses;
- by clients in hotels, motels and other residential type environments; bed and breakfast type environments.

**Risk of fire!**
- Combustible items stored in the cooking compartment may catch fire. Never store combustible items in the cooking compartment. Never open the appliance door if there is smoke inside. Switch off the appliance and unplug it from the mains or switch off the circuit breaker in the fuse box.
- When heating food in plastic or paper containers, keep an eye on the oven due to the possibilities of ignition.
- If smoke is observed, switch off or unplug the appliance and keep the door closed in order to stifle any flames.

**WARNING:** Accessible parts may become hot during use. Young children should be kept away.

**WARNING:** Do not use harsh abrasive cleaners or sharp metal scrapers to clean the microwave oven door glass since they can scratch the surface, which may result in shattering of the glass.

**Risk of explosion!**
Liquids and other food may explode when in containers that have been tightly sealed. Never heat liquids or other food in containers that have been tightly sealed.

Only use utensils that are suitable for use in microwave ovens.
Risk of serious damage to health!

- The surface of the appliance may become damaged if it is not cleaned properly. Microwave energy may escape. Clean the appliance on a regular basis, and remove any food residue immediately. Always keep the cooking compartment, door seal, door and door stop clean; see also section *Care and cleaning.*

**WARNING:** If the door or door seals are damaged, the oven must not be operated until it has been repaired by a competent person.

**WARNING:** It is hazardous for anyone other than a competent person to carry out any service or repair operation that involves the removal of a cover which gives protection against exposure to microwave energy.

- Microwave energy may escape if the cooking compartment door or the door seal is damaged. Never use the appliance if the cooking compartment door or the door seal is damaged. Contact the after-sales service.

- Microwave energy will escape from appliances that do not have any casing. Never remove the casing. For any maintenance or repair work, contact the after-sales service.

Risk of electric shock!

- Incorrect repairs are dangerous. Repairs may only be carried out and damaged power cables replaced by one of our trained after-sales technicians. If the appliance is defective, unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.

- The cable insulation on electrical appliances may melt when touching hot parts of the appliance. Never bring electrical appliance cables into contact with hot parts of the appliance.

- Penetrating moisture may cause an electric shock. Do not use any high-pressure cleaners or steam cleaners.

- A defective appliance may cause electric shock. Never switch on a defective appliance. Unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.

- The appliance is a high-voltage appliance. Never remove the casing.

**WARNING:** Ensure that the appliance is switched off before replacing the lamp to avoid the possibility of electric shock.

Risk of burns!

- During use the appliance becomes hot. Care should be taken to avoid touching heating elements inside the oven.

- Accessories and ovenware become very hot. Always use oven gloves to remove accessories or ovenware from the cooking compartment.
- Alcoholic vapours may catch fire in the hot cooking compartment. Never prepare food containing large quantities of drinks with a high alcohol content. Only use small quantities of drinks with a high alcohol content. Open the appliance door with care.

- Foods with peel or skin may burst or explode during, or even after, heating. Never cook eggs in their shells or reheat hard-boiled eggs. Never cook shellfish or crustaceans. Always prick the yoke when baking or poaching eggs. The skin of foods that have a peel or skin, such as apples, tomatoes, potatoes and sausages, may burst. Before heating, prick the peel or skin.

- The contents of feeding bottles and baby food jars shall be stirred or shaken and the temperature checked before consumption, in order to avoid burns.

- Heated food gives off heat. The ovenware may become hot. Always use oven gloves to remove ovenware or accessories from the cooking compartment.

**WARNING:** Liquids and other foods must not be heated in sealed containers since they are liable to explode. Always observe the instructions on the packaging. Always use oven gloves to remove dishes from the cooking compartment.

**Risk of scalding!**
- When you open the appliance door, hot steam may escape. Open the appliance door with care. Keep children at a safe distance.

- Microwave heating of beverages can result in delayed eruptive boiling, therefore care must be taken when handling the container. This means that the liquid reaches boiling temperature without the usual steam bubbles rising to the surface. Even if the container only vibrates a little, the hot liquid may suddenly boil over and spatter. When heating, always place a spoon in the container. This will prevent delayed boiling.

**Risk of injury!**
- Scratched glass in the appliance door may develop into a crack. Do not use a glass scraper, or sharp or abrasive cleaning aids or detergents.

- Unsuitable ovenware may crack. Porcelain or ceramic ovenware can have small perforations in the handles or lids. These perforations conceal a cavity below. Any moisture that penetrates this cavity could cause the ovenware to crack. Only use microwave-safe ovenware.
Caution!

- Creation of sparks: Metal - e.g. a spoon in a glass - must be kept at least 2 cm from the oven walls and the inside of the door. Sparks could irreparably damage the glass on the inside of the door.
- Water in the hot cooking compartment: Never pour water into the hot cooking compartment. This will cause steam. The temperature change can cause damage.
- Moist food: Do not store moist food in the closed cooking compartment for long periods. Do not use the appliance to store food. This can lead to corrosion.
- Cooling with the appliance door open: Only leave the cooking compartment to cool with the door closed. Do not trap anything in the appliance door. Even if the door is only slightly ajar, the fronts of adjacent units may be damaged over time.
- Heavily soiled seal: If the seal is very dirty, the appliance door will no longer close properly during operation. The fronts of adjacent units could be damaged. Always keep the seal clean.
- Operating the microwave without food: Operating the appliance without food in the cooking compartment may lead to overloading. Never switch on the appliance unless there is food in the cooking compartment. An exception to this rule is a short crockery test (see the section "Microwave, suitable crockery").
- Using the appliance door for standing on or placing objects on: Do not stand or place anything on the open appliance door. Do not place overeware or accessories on the appliance door.
- Transporting the appliance: Do not carry or hold the appliance by the door handle. The door handle cannot support the weight of the appliance and could break.
- Microwave popcorn: Never set the microwave power too high. Use a power setting no higher than 600 watts. Always place the popcorn bag on a glass plate. The disc may jump if overloaded.
- Liquid that has boiled over must not be allowed to run through the turntable drive into the interior of the appliance. Monitor the cooking process. Choose a shorter cooking time initially, and increase the cooking time as required.
- The oven should be cleaned regularly and any food deposits removed since they may explode, even after microwave heating has ended.
- Failure to maintain the oven in a clean condition could lead to deterioration of the surface that could adversely affect the life of the appliance and possibly result in a hazardous situation.

Countertop Installation

Remove all packing material and accessories. Examine the oven for any damage such as dents or broken door. Do not install if oven is damaged.

Installation

1. Select a level surface that provide enough open space for the intake and/or outlet vents.

(1) The minimum installation height is 85cm.

(2) The rear surface of appliance shall be placed against a wall. Leave a minimum clearance of 30cm above the oven, a minimum clearance of 20cm is required between the oven and any adjacent walls.

(3) Do not remove the legs from the bottom of the oven.

(4) Blocking the intake and/or outlet openings can damage the oven.

(5) Place the oven as far away from radios and TV as possible. Operation of microwave oven may cause interference to your radio or TV reception.

2. Plug your oven into a standard household outlet. Be sure the voltage and the frequency is the same as the voltage and the frequency on the rating label.

WARNING: Do not install oven over a range cooktop or other heat-producing appliance. If installed near or over a heat source, the oven could be damaged and the warranty would be void.

The accessible surface may be hot during operation.
Your new appliance

Use this section to familiarise yourself with your new appliance. The control panel and the individual operating controls are explained. You will find information on the cooking compartment and the accessories.

Control panel

Touch keys and display

The touch keys are used to set the various additional functions. On the display, you can read the values that you have set.

Cooling fan

Your appliance has a cooling fan. The cooling fan switches on during operation. The hot air escapes above the door. The cooling fan continues to run for a certain time after operation.

Caution!

Do not cover the ventilation slots. Otherwise, the appliance will overheat.

Notes

- The appliance remains cool during microwave operation. The cooling fan will still switch on. The fan may run on even when microwave operation has ended.
- Condensation may appear on the door window, interior walls and floor. This is normal and does not adversely affect microwave operation. Wipe away the condensation after cooking.
Tarttable
As a surface for the wire rack.
Food which particularly requires a lot of heat from underneath can be prepared directly on the turntable.
The turntable can turn clockwise or anti-clockwise.
Place the turntable on the drive in the centre of the cooking compartment. Ensure that it is properly fitted.
Never use the microwave without the turntable.
The turntable can withstand max. 5 kg.
The turntable must turn when using all types of heating.

Lower wire rack
For the microwave and for baking and roasting in the oven.

Higher wire rack
For grilling, e.g. steaks, sausages and for toasting bread.
As a support for shallow dishes.

Note:
Type and quantity of accessories is subject to actual demand.

Before using the appliance for the first time

Here you will find everything you need to do before using your oven to prepare food for the first time. First read the section on Safety information.

Setting the clock

Once the appliance is connected, "00:00" will blink, buzzer will ring once. Set the clock.
1. Turn the " " knob between 00:00 and 23:59
2. Touch the key.
The time is set.

Heating up the oven

To remove the new cooker smell, heat up the oven when it is empty and closed. One hour with Hot air at 230 °C is ideal. Ensure that no packaging remnants have been left in the cooking compartment.
1. Use the function selector to set Hot air.
2. Use the temperature selector to set the temperature to 230 °C.
3. Touch the key. Turn the knob to set the cooking time to 60 minutes.
4. Touch the key. The oven begins to heat up.

Cleaning the accessories

Before you use the accessories for the first time, clean them thoroughly with hot soapy water and a soft dish cloth.

Setting the oven

There are various ways in which you can set your oven. Here we will explain how you can select the desired type of heating and temperature or grill setting. You can also select the oven cooking time for your dish. Please refer to the section on Setting the time-setting options.

Setting the type of heating and temperature

Example in diagram: Hot air at 200 °C for 25 minutes.
1. Set the function selector to .
2. The default temperature 180 °C will blink. Turn the knob to set the temperature to 200°C.
3. Touch the key. Turn the knob to set the cooking time to 25 minutes.
4. Touch the key. The oven begins to heat up.

Opening the oven door during operation
Operation is suspended. After closing the door, touch the key. Operation continues.

Pausing operation
Touch the key to pause operation. Touch the key to continue operation.

Changing the cooking time
This can be done at any time. Touch the key. Turn the knob to change the cooking time.

Changing the temperature
This can be done at any time. Touch the for the new temperature setting. Turn the knob to set the temperature.

Cancelling operation
Touch the key twice to cancel operation.
Rapid Preheating
With rapid preheating, your oven reaches the set temperature particularly quickly.

Rapid Preheating is available for the following types of heating:
- 3D Hot air
- Grill with fan
- Microwave+Hot air
- Microwave+Grill Fan

To ensure an oven cooking result, only put your food in the cooking compartment when the preheating phase is complete.

1. Setting the type of heating and temperature.
2. Touch the key.
   The symbol lights up in the display.
3. Touch the key.
   The oven begins to heat up.

The microwave
Microwaves are converted to heat in foodstuffs. The microwave can be used solo, i.e. on its own, or in combination with a different type of heating. You will find information about ovenware and how to set the microwave.

Note:
In the Expert Cooking Guide, you will find examples for defrosting, heating and cooking with the microwave oven.

Note:
The step quantities for the adjustment time of the coding switch are as follow:
- 0-1 min : 1seconds
- 1-5 min : 10seconds
- 5-15 min : 30seconds
- 15-60 min : 1minute
- 60 min : 5minutes

Notes regarding ovenware
Suitable ovenware
Suitable dishes are heat-resistant ovenware made of glass, glass ceramic, porcelain, ceramic or heat-resistant plastic. These materials allow microwaves to pass through.
You can also use serving dishes. This saves you having to transfer food from one dish to another. You should only use ovenware with decorative gold or silver trim if the manufacturer guarantees that they are suitable for use in microwaves.

Unsuitable ovenware
Metal ovenware is unsuitable. Metal does not allow microwaves to pass through. Food in covered metal containers will remain cold.

Caution!
Creation of sparks: metal – e.g. a spoon in a glass – must be kept at least 2 cm from the oven walls and the inside of the door. Sparks could destroy the glass on the inside of the door.

The preheating process is complete
A signal sounds. The symbol in the display blinks. Put your dish in the oven.

Cancelling rapid preheating
During setting the rapid preheating function, touch the or key can cancel the function.
During rapid preheating, touch the or key can cancel the function. Also you can open the door to cancel the function.

Note: 1. The rapid preheating function only works if you have already chosen one of the modes above. During preheating, the microwave function is switched off.
2. Only when you can hear alarm and preheating icon is blinking you can open the door and put food inside.

Ovenware test
Do not switch on the microwave unless there is food inside. The following ovenware test is the only exception to this rule.
Perform the following test if you are unsure whether your ovenware is suitable for use in the microwave:
1. Heat the empty ovenware at maximum power for ½ to 1 minute.
2. Check the temperature occasionally during that time.
The ovenware should still be cold or warm to the touch.
The ovenware is unsuitable if it becomes hot or sparks are generated.

Microwave power settings
Use the key to set the desired microwave power.

<table>
<thead>
<tr>
<th>Power</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>100W</td>

</tbody>
</table>

Notes
- When you touch a key, the selected power lights up.
- The microwave power can be set to 900 watts for a maximum of 30 minutes. With all other power settings a maximum cooking time of 1 hour 30 minutes is possible.
Setting the microwave

Example: Microwave power setting 300 W, cooking time 17 minutes

1. Touch the   key. The default microwave power 900W will appear. And the default cooking time will blink.
2. Touch the   key to activate the microwave function.
   Turn “ ” knob to adjust the microwave power to 300W.
3. Touch the   key. Turn “ ” knob to adjust the cooking time to 17 minutes.
4. Touch the   key. Operation begins. The cooking time starts counting down in the display.

The cooking time has elapsed
A signal sounds. Microwave operation has finished.

Opening the oven door during operation
Operation is suspended. After closing the door, touch the   key. Operation continues.

Changing the cooking time
This can be done at any time. Touch the   key. Turn “ ” knob to change the cooking time.

Changing the microwave power setting
This can be done at any time. Touch the   for the new microwave power setting. Turn “ ” knob to set the microwave power.

Pausing operation
Touch the   key briefly. The oven is paused. Press the   button again to continue operation.

Cancelling operation
Touch the   key twice to cancel operation.

Notes
- When you set the function selector to , the highest microwave power setting always lights up as the suggested setting.
- If you open the appliance door during cooking, the fan may continue to run.

MicroCombi operation

This involves simultaneous operation of the grill and the microwave. Using the microwave makes your dishes ready more quickly, but they are still nicely browned.

You can switch on all microwave power settings.
Exception: 900 watts

Setting Microwave Combi operation

Example: microwave 100 W, 17 minutes and hot air 190 °C.

1. Set the function selector to .
2. The default temperature 180 °C will blink. Turn “ ” knob to set the temperature to 190 °C.
3. The default microwave power is 300W. Touch the   key, then turn “ ” knob to set the microwave power to 100W.
4. Touch the   key. Turn “ ” knob to set the cooking time to 17 minutes.
5. Touch the   key.

Appliance operation begins. The cooking time starts counting down.

The cooking time has elapsed
A signal sounds. Combination mode has finished.

Opening the oven door during cooking
Operation is suspended. After closing the door, touch the   key. The programme will then continue.

Pausing operation
Touch the   key briefly. The oven is paused. Press the   button again to continue operation.

Changing the cooking time
This can be done at any time. Touch the   key. Turn “ ” knob to change the cooking time.

Changing the microwave power setting
This can be done at any time. Touch the   for the new microwave power setting. Turn “ ” knob to set the microwave power.

Changing the temperature
This can be done at any time.
Touch the   for the new temperature setting. Turn “ ” knob to set the temperature.

Cancelling operation
Touch the   key twice to cancel operation.

Automatic programmes

The automatic programmes enable you to prepare food very easily. You select the programme and enter the weight of your food. The automatic programme makes the optimum setting. You can choose from 10 programmes.

Always place the food in the cold cooking compartment.

Setting a programme

When you have selected a programme, set the oven. The temperature selector must be in the off position.

Example in diagram: Programme 3 with a weight of 1 kilogramme.

1. Set the function selector to automatic programmes .
   The first programme number appears in the display.
2. Turn “ ” knob to select the programme number.
3. Touch the   key.
4. Turn “ ” knob to set the weight, cooking time will shown.
5. Touch the   key. The programme starts. You can see the cooking time counting down.
Programme has ended
A signal sounds. The oven stops heating.

Changing the programme
Once you have started the programme, the programme number and weight cannot be changed.

Cancelling the programme
Touch the key twice to cancel operation.

Changing the cooking time
If using automatic programmes, you cannot change the cooking time.

Defrosting programmes
You can use the 2 defrosting programmes to defrost meat, poultry and bread.

1. Set the function selector to automatic programmes.
   The first programme number appears in the display.
2. Turn " " knob to select the programme number.
3. Touch the key.
4. Turn " " knob to set the weight, cooking time will shown.
5. Touch the key. The programme starts. You can see the cooking time counting down.

Notes

Preparing food
Use food that has been frozen at -18 °C and stored in portion-sized quantities that are as thin as possible.
Take the food to be defrosted out of all packaging and weigh it.
You need to know the weight to set the programme.

Liquid will be produced when defrosting meat or poultry. Drain off this liquid when turning meat and poultry and under no circumstances use it for other purposes or allow it to come into contact with other foods.

Ovenware
Place the food in a microwaveable shallow dish, e.g. a china or glass plate, but do not cover.
When defrosting chicken and chicken portions (d 01), an audible signal will sound on two occasions to indicate that the food should be turned.

Resting time
The defrosted food should be left to stand for an additional 10 to 30 minutes until it reaches an even temperature. Large pieces of meat require a longer standing time than smaller pieces. Flat pieces of meat and items made from minced meat should be separated from each other before leaving to stand.
After this time, you can continue to prepare the food, even though thick pieces of meat may still be frozen in the middle. The giblets can be removed from poultry at this point.

Setting the time-setting options
Your oven has various time-setting options. You can use the key to call up the menu and switch between the individual functions. A time-setting option that has already been set can be changed directly with the " " knob.

Setting the timer
You can use the timer as a kitchen timer. It runs independently of the oven. The timer has its own audible signal. In this way, you can tell whether it is the timer or a cooking time which has elapsed.

Notes

Preparing food
The programmes with a * are preheated. During preheating, the cooking time pauses and the preheating symbol is on. After preheating, you will hear an alarm and the preheating symbol will blink.

The programmes with ** only use the microwave function.

Programme has ended
A signal sounds. The oven stops heating.

Defrosting programmes
You can use the 2 defrosting programmes to defrost meat, poultry and bread.

1. Set the function selector to automatic programmes.
   The first programme number appears in the display.
2. Turn " " knob to select the programme number.
3. Touch the key.
4. Turn " " knob to set the weight, cooking time will shown.
5. Touch the key. The programme starts. You can see the cooking time counting down.

   The first programme number appears in the display.
2. Turn " " knob to select the programme number.
3. Touch the key.
4. Turn " " knob to set the weight, cooking time will shown.
5. Touch the key. The programme starts. You can see the cooking time counting down.

Notes

Preparing food
Use food that has been frozen at -18 °C and stored in portion-sized quantities that are as thin as possible.
Take the food to be defrosted out of all packaging and weigh it.
You need to know the weight to set the programme.

Liquid will be produced when defrosting meat or poultry. Drain off this liquid when turning meat and poultry and under no circumstances use it for other purposes or allow it to come into contact with other foods.

Ovenware
Place the food in a microwaveable shallow dish, e.g. a china or glass plate, but do not cover.
When defrosting chicken and chicken portions (d 01), an audible signal will sound on two occasions to indicate that the food should be turned.

Resting time
The defrosted food should be left to stand for an additional 10 to 30 minutes until it reaches an even temperature. Large pieces of meat require a longer standing time than smaller pieces. Flat pieces of meat and items made from minced meat should be separated from each other before leaving to stand.
After this time, you can continue to prepare the food, even though thick pieces of meat may still be frozen in the middle. The giblets can be removed from poultry at this point.

Setting the time-setting options
Your oven has various time-setting options. You can use the key to call up the menu and switch between the individual functions. A time-setting option that has already been set can be changed directly with the " " knob.

Setting the timer
You can use the timer as a kitchen timer. It runs independently of the oven. The timer has its own audible signal. In this way, you can tell whether it is the timer or a cooking time which has elapsed.

Notes

Preparing food
The programmes with a * are preheated. During preheating, the cooking time pauses and the preheating symbol is on. After preheating, you will hear an alarm and the preheating symbol will blink.

The programmes with ** only use the microwave function.

Programme has ended
A signal sounds. The oven stops heating.

Defrosting programmes
You can use the 2 defrosting programmes to defrost meat, poultry and bread.

1. Set the function selector to automatic programmes.
   The first programme number appears in the display.
2. Turn " " knob to select the programme number.
3. Touch the key.
4. Turn " " knob to set the weight, cooking time will shown.
5. Touch the key. The programme starts. You can see the cooking time counting down.

Notes

Preparing food
Use food that has been frozen at -18 °C and stored in portion-sized quantities that are as thin as possible.
Take the food to be defrosted out of all packaging and weigh it.
You need to know the weight to set the programme.

Liquid will be produced when defrosting meat or poultry. Drain off this liquid when turning meat and poultry and under no circumstances use it for other purposes or allow it to come into contact with other foods.

Ovenware
Place the food in a microwaveable shallow dish, e.g. a china or glass plate, but do not cover.
When defrosting chicken and chicken portions (d 01), an audible signal will sound on two occasions to indicate that the food should be turned.

Resting time
The defrosted food should be left to stand for an additional 10 to 30 minutes until it reaches an even temperature. Large pieces of meat require a longer standing time than smaller pieces. Flat pieces of meat and items made from minced meat should be separated from each other before leaving to stand.
After this time, you can continue to prepare the food, even though thick pieces of meat may still be frozen in the middle. The giblets can be removed from poultry at this point.

Setting the time-setting options
Your oven has various time-setting options. You can use the key to call up the menu and switch between the individual functions. A time-setting option that has already been set can be changed directly with the " " knob.

Setting the timer
You can use the timer as a kitchen timer. It runs independently of the oven. The timer has its own audible signal. In this way, you can tell whether it is the timer or a cooking time which has elapsed.
The timer duration has elapsed
A signal sounds. 0:00 is shown in the display.

Cancelling the timer duration
Touch the \( \text{\textregistered} \) key to cancel the timer duration.

Setting the cooking time
The cooking time for your meal can be set on the oven. When the cooking time has elapsed, the oven switches itself off automatically. This means that you do not have to interrupt other work to switch off the oven. The cooking time cannot be accidentally exceeded.

The oven starts. The cooking time counts down in the display.

The cooking time has elapsed
An audible signal sounds. The oven stops heating. 0:00 is shown in the display.

Setting the clock
Once the appliance is connected, "00:00" will blink, buzzer will ring once. Set the clock.
1. Turn "\( \text{\textregistered} \)" knob between 00:00 and 23:59
2. Touch the \( \text{\textregistered} \) key. The time is set.

Changing the clock
1. Touch and hold the \( \text{\textregistered} \) key for 3 seconds in waiting state. The actual time disappear and then the time will blink in the display.
2. Turn "\( \text{\textregistered} \)" knob to set the new time and touch the \( \text{\textregistered} \) key to confirm the setting.

Childproof lock
The oven has a childproof lock to prevent children switching it on accidentally.

The oven will not react to any settings. The timer and clock can also be set when the childproof lock has been switched on.

Switching on the childproof lock
Requirement: No cooking time should be set and the function selector is in the off position.
Touch and hold the \( \text{\textregistered} \) key for approx. 3 seconds. The \( \text{\textregistered} \) symbol appears in the display. The childproof lock is activated.

Switching off the childproof lock
Touch and hold the \( \text{\textregistered} \) key for approx. 3 seconds. The \( \text{\textregistered} \) symbol on the display goes out. The childproof lock is deactivated.

Childproof lock with other cooking operations
When other cooking programmes have been set, the childproof lock is not operational.

Quick Start
1. In waiting state, touch \( \text{\textregistered} \) key to start 30 seconds' cooking with 900W microwave power.
2. During cooking (except Auto Cook and Defrost), each added touch of \( \text{\textregistered} \) key can increase 30 seconds cooking time up to the corresponding MAX. cooking time.
Care and cleaning

With careful care and cleaning your microwave oven will retain its looks and remain good order. We will explain here how you should care for and clean your appliance correctly.

⚠️ Risk of electric shock.
Penetrating moisture may cause an electric shock. Do not use any high-pressure cleaners or steam cleaners.

⚠️ Risk of burns!
Never clean the appliance immediately after switching off. Let the appliance cool down.

⚠️ Risk of serious damage to health!
Microwave energy may escape if the cooking compartment door or the door seal is damaged. Never use the appliance if the cooking compartment door or the door seal is damaged. Contact the after-sales service.

Notes

■ Slight differences in colour on the front of the appliance are caused by the use of different materials, such as glass, plastic and metal.
■ Shadows on the door panel which look like streaks, are caused by reflections made by the oven light.
■ Unpleasant odours, e.g. after fish has been prepared, can be removed very easily. Add a few drops of lemon juice to a cup of water. Place a spoon into the container as well, to prevent delayed boiling. Heat the water for 1 to 2 minutes at maximum microwave power.

Cleaning agents

To ensure that the different surfaces are not damaged by using the wrong cleaning agent, observe the information in the table. Do not use

■ sharp or abrasive cleaning agents,
■ metal or glass scrapers to clean the glass in the appliance door.
■ metal or glass scrapers to clean the door seal,
■ hard scouring pads and sponges,
■ cleaning agents with high concentrations of alcohol.

Wash new sponge cloths thoroughly before use. Allow all surfaces to dry thoroughly before using the appliance again.

Malfunction table

Malfunctions often have simple explanations. Please refer to the malfunction table before calling the after-sales service. If a meal does not turn out exactly as you wanted, refer to the Expert Cooking Guide section, where you will find plenty of cooking tips and tricks.

⚠️ Risk of electric shock!
Incorrect repairs are dangerous. Repairs may only be carried out by one of our trained after-sales engineers.

Acrylamide in foodstuffs

Which foods are affected?
Acrylamide is mainly produced in grain and potato products that are heated to high temperatures, such as potato crisps, chips, toast, bread rolls, bread, fine baked goods (biscuits, gingerbread, cookies).

Tips for keeping acrylamide to a minimum when preparing food

<table>
<thead>
<tr>
<th>General</th>
<th>Keep cooking times to a minimum. Cook meals until they are golden brown, but not too dark. Large, thick pieces of food contain less acrylamide.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Baking biscuits Oven chips</td>
<td>Max. 200 °C in Top/bottom heating or max. 180 °C in 3D hot air or hot air mode. Max. 190 °C in Top/bottom heating or max. 170 °C in 3D hot air or hot air mode. Egg white and egg yolk reduce the formation of acrylamide. Distribute thinly and evenly over the baking tray. Cook at least 400 g at once on a baking tray so that the chips do not dry out.</td>
</tr>
</tbody>
</table>
Energy and environment tips

Here you can find tips on how to save energy when baking and roasting and how to dispose of your appliance properly.

Saving energy

- Only preheat the oven if this is specified in the recipe or in the operating instruction tables.
- Use dark, black lacquered or enamelled baking tins. They absorb the heat particularly well.
- Open the oven door as infrequently as possible while you are cooking, baking or roasting.
- It is best to bake several cakes one after the other. The oven is still warm. This reduces the baking time for the second cake.
- You can also place two loaf tins next to each other.

For longer cooking times, you can switch the oven off 10 minutes before the end of the cooking time and use the residual heat to finish cooking.

Environmentally-friendly disposal

Dispose of packaging in an environmentally-friendly manner.

This appliance complies with European Directive 2002/96/EC on Waste Electrical and Electronic Equipment (WEEE). The directive gives a framework for the collection and recycling of old appliances, which is valid across the EU.

Expert Cooking Guide

Here you will find a selection of recipes and the ideal settings for them. We will show you which type of heating and which temperature or microwave power setting is best for your meal. You can find information about suitable accessories and the height at which they should be inserted. There are also tips about ovenware and preparation methods.

Notes

- The values in the table always apply to food placed into the cooking compartment when it is cold and empty. Only preheat the appliance if the table specifies that you should do so. Before using the appliance, remove all accessories from the cooking compartment that you will not be using.
- Do not line the accessories with greaseproof paper until after they have been preheated.
- The times specified in the tables are only guidelines. They will depend on the quality and composition of the food.
- Use the accessories supplied. Additional accessories may be obtained from specialist retailers or from the after-sales service.
- Always use an oven cloth or oven gloves when taking accessories or ovenware out of the cooking compartment.

Defrosting, heating up and cooking with the microwave

The following tables provide you with numerous options and settings for the microwave.

The times specified in the tables are only guidelines. They may vary according to the ovenware used, the quality, temperature and consistency of the food.

Time ranges are often specified in the tables. Set the shortest time first and then extend the time if necessary.

It may be that you have different quantities from those specified in the tables. A rule of thumb can be applied: Double amount - just under double the cooking time, half amount - half the cooking time.

Defrosting

Notes

- Place the frozen food in an open container on the lower wire rack.
- Delicate parts such as the legs and wings of chicken or fatty outer layers of roasts can be covered with small pieces of aluminium foil. The foil must not touch the cooking compartment walls. You can remove the foil half way through the defrosting time.
- Turn or stir the food once or twice during the defrosting time. Large pieces of food should be turned several times. When turning, remove any liquid that has resulted from defrosting.
- Leave defrosted items to stand at room temperature for a further 10 to 60 minutes so that the temperature can stabilise. The giblets can be removed from poultry at this point.

</tbody>
</table>

- Place the food directly on the turntable.

Defrosting, heating up or cooking frozen food

Notes
- Take ready meals out of the packaging. They will heat up more quickly and evenly in microwaveable ovenware. The different components of the meal may not require the same amount of time to heat up.
- Food which lies flat will cook more quickly than food which is piled high. You should therefore distribute the food so that it is as flat as possible in the ovenware. Different foodstuffs should not be placed in layers on top of one another.
- Always cover the food. If you do not have a suitable cover for your ovenware, use a plate or special microwave foil.
- Stir or turn the food 2 or 3 times during cooking.
- After heating, allow the food to stand for a further 2 to 5 minutes so that it can achieve an even temperature.
- Always use an oven cloth or oven gloves when removing plates from the oven.
- This will help the food retain its own distinct taste, so it will require less seasoning.

Heating food

⚠️ Risk of scalding!
There is a possibility of delayed boiling when a liquid is heated. This means that the liquid reaches boiling temperature without the usual steam bubbles rising to the surface. Even if the container only moves a little, the hot liquid can suddenly boil over and spatter. When heating liquids, always place a spoon in the container. This will prevent delayed boiling.
Caution!
Metal - e.g. a spoon in a glass - must be kept at least 2 cm from the oven walls and the inside of the door. Sparks could irreparably damage the glass on the inside of the door.

Notes
- Take ready meals out of the packaging. They will heat up more quickly and evenly in microwaveable ovenware. The different components of the meal may not require the same amount of time to heat up.
- Always cover the food. If you do not have a suitable cover for your container, use a plate or special microwave foil.
- Stir or turn the food several times during the heating time. Check the temperature.
- After heating, allow the food to stand for a further 2 to 5 minutes so that it can achieve an even temperature.
- Always use an oven cloth or oven gloves when removing plates from the oven.
- Place the food directly on the turntable.

Popcorn for the microwave

Notes
- Use heat-resistant, flat glass ovenware, e.g. the lid of an ovenproof dish, a glass plate or a glass tray (Pyrex)
- Always place the ovenware on the wire rack.
- Do not use porcelain or overly curved plates.

- Make the settings as described in the table. You can adjust the timings according to product and amount.
- So that the popcorn doesn’t burn, briefly take the popcorn bag out of the oven after 1 minute and 30 seconds and shake it. Take care as the bag will be hot!

⚠️ Risk of scalding!
- Open the popcorn bag carefully as hot steam may be released.
- Never set the microwave to full power.

Microwave tips

You cannot find any information about the settings for the quantity of food you have prepared.

The food has become too dry.

When the time has elapsed, the food is not defrosted, hot or cooked.

When the time has elapsed, the food is overheated at the edge but not done in the middle.

After defrosting, the poultry or meat is defrosted on the outside but not defrosted in the middle.

Next time, set a shorter cooking time or select a lower microwave power setting. Cover the food and add more liquid.

Set a longer time. Large quantities and food which is piled high require longer times.

Stir it during the cooking time and next time, select a lower microwave power setting and a longer cooking time.

Next time, select a lower microwave power setting. If you are defrosting a large quantity, turn it several times.

Cakes and pastries

About the tables

Notes
- The times given apply to food placed in a cold oven.
- The temperature and baking time depend on the consistency and amount of the mixture. This is why temperature ranges are given in the tables. Begin with the lower temperature and, if necessary, use a higher setting the next time, since a lower temperature results in more even browning.
- Additional information can be found in the Baking tips section following the tables.

Always place the cake tin in the centre of the lower wire rack.

Baking tins

Note: It is best to use dark-coloured metal baking tins.

* Allow cake to cool in the oven for approx. 20 minutes.
Baking tips

You want to bake according to your own recipe. Use similar items in the baking tables as a guide.

Use baking tins made of silicone, glass, plastic or ceramic materials. The baking tin must be heat-resistant up to 250 °C. Cakes in these baking tins will be less brown. When using the microwave, the cooking time will be shorter than the time shown in the table.

How to establish whether sponge cake is baked through. Approximately 10 minutes before the end of the baking time specified in the recipe, poke the cake with a cocktail stick at its highest point. If the cocktail stick comes out clean, the cake is ready.

The cake collapses. Use less liquid next time or set the oven temperature 10 degrees lower and extend the baking time. Observe the specified mixing times in the recipe.

The cake cannot be turned out of the dish when it is turned upside down. Only grease the base of the springform cake tin. After baking, loosen the cake carefully with a knife.

The cake is too dry. When it is done, make small holes in the cake using a toothpick. Then drizzle fruit juice or an alcoholic beverage over it. Next time, select a temperature 10 degrees higher and reduce the baking time.

The bread or cake (e.g. cheesecake) looks good, but is soggy on the inside (sticky, streaked with water). Use slightly less fluid next time and bake for slightly longer at a lower temperature. When baking cakes with a moist topping, bake the base first, cover with almonds or bread crumbs and then add the topping. Please follow the recipe and order the baking times.

The cake cannot be turned out of the dish when it is turned upside down. After baking, allow the cake to cool for a further 5 to 10 minutes, then it will be easier to turn out of the tin. If it still sticks, carefully loosen the cake around the edges using a knife. Turn the cake tin upside down again and cover it several times with a cold, wet cloth. Next time, grease the tin well and sprinkle some bread crumbs into it.

You have measured the temperature of the oven using your own meat thermometer and found there is a discrepancy. The oven temperature is measured by the manufacturer after a specified period of time using a test rack in the centre of the cooking compartment. Ovenware and accessories affect the temperature measurement, so there will always be some discrepancy when you measure the temperature yourself.

 Sparks are generated between the tin and the wire rack. Check that the tin is clean on the outside. Change the position of the tin in the cooking compartment. If this does not help, continue baking but without the microwave. The baking time will then be longer.
Roasting and grilling

About the tables
The temperature and roasting time depend on the type and amount of food being cooked. This is why temperature ranges are given in the tables. Begin with the lower temperature and, if necessary, use a higher setting the next time.

For more information, see the section entitled Tips for grilling and roasting which follows the tables.

Ovenware
You may use any heat-resistant ovenware which is suitable for use in a microwave. Metal roasting dishes are not suitable for roasting with microwaves.

The ovenware can become very hot. Use oven gloves to take the ovenware out of the oven.

Place hot glass ovenware on a dry kitchen towel after they have been removed from the oven. The glass could crack if placed on a cold or wet surface.

Tips for roasting

Notes
- Use a deep roasting dish for roasting meat and poultry.
- Check that your ovenware fits in the cooking compartment. It should not be too big.
- Meat:
  Cover approx. two thirds of the ovenware base with liquid. Add slightly more liquid for pot roasts. Turn pieces of meat halfway through the cooking time. When the roast is ready, turn off the oven and allow it to rest for an additional 10 minutes. This allows better distribution of the meat juices.
- Poultry:
  Turn the pieces of meat after ⅔ of the cooking time has elapsed.

Tips for grilling

Notes
- Always keep the oven door closed when grilling and do not preheat.
- As far as possible, the pieces of food you are grilling should be of equal thickness. Steaks should be at least 2 to 3 cm thick. This will allow them to brown evenly and remain succulent and juicy. Do not add salt to steaks until they have been grilled.
- Use tongs to turn the pieces of food you are grilling. If you pierce the meat with a fork, the juices will run out and it will become dry.
- Dark meat, e.g. beef, browns more quickly than lighter-coloured meat such as veal or chicken. When grilling light-coloured meat or fish, these often only brown slightly on the surface, although they are cooked and juicy on the inside.
- The grill element switches off and on again automatically. This is normal. The grill setting determines how frequently this will happen.

Beef

Notes
- Turn pot-roasted beef after ⅔ and ⅔ of the cooking time. Finally, allow to stand for approx. a further 10 minutes.
- Turn tenderloins and sirloins halfway through the cooking time. Finally, allow to stand for approx. a further 10 minutes.
- Turn steaks after ⅔ of the cooking time.

### Tips for roasting and grilling

The table does not contain information for the weight of the joint.

For small roasts, select a higher temperature and a shorter cooking time. For larger roasts, select a lower temperature and a longer cooking time.

**How to tell when the roast is ready.**

Use a meat thermometer (available from specialist shops) or carry out a “spoon test”. Press down on the roast with a spoon. If it feels firm, it is ready. If the spoon can be pressed in, it needs to be cooked for a little longer.

The roast looks good but the juices are burnt. Next time, use a smaller roasting dish or add more liquid.

The roast looks good but the juices are too clear and watery. Next time, use a larger roasting dish and add less liquid.

The roast is not well-done enough. Carve the roast. Prepare the gravy in the roasting dish and place the slices of roast meat in the gravy. Finish cooking the meat using the microwave only.

### Bakes, gratins, toast with toppings

**Notes**

- The values in the table apply to food placed in a cold oven.
- For bakes, potato gratins and lasagne, use a microwaveable, heat-resistant ovenproof dish 4 to 5 cm deep.

**Tips for roasting and grilling**

- Place the bake on the lower wire rack.
- Leave bakes and gratins to cook in the oven for a further 5 minutes after switching off.
- Cheese on toast: Pre-toast slices of bread.
